Animal Welfare / Animal Husbandry & Veterinary Ambulance Services

Government Department / Directorate

SUBJECT: GPS ANIMAL AMBULANCE TRACKING - WORKFLOW & MANAGEMENT PLAN

Dear Sir/Madam,

Mahaprabhu Tech Innovation Private Limited will manage the technology layer for animal-welfare ambulance tracking by linking the approved GPS device, emergency case, ambulance, trip and Medical Admin dashboard in one controlled system.

1. End-to-End GPS Ambulance Workflow

EN ROUTE -> ARRIVED -> RESCUE / TREATMENT -> TRANSPORT (IF REQUIRED) -> COMPLETED

The active case, GPS movement and trip record remain linked from dispatch to completion.

2. What the System Captures

Ambulance & Device: Vehicle number, ambulance ID, GPS IMEI/device ID, district, facility and driver.

Live GPS: Latitude/longitude, speed, heading, device/ignition status, GPS time and last update.

Emergency Case: Case ID, dispatch, en-route, arrival, rescue/transport and completion timestamps.

Trip Evidence: Route history, start/end, kilometres travelled, GPS stale/offline periods and movement.

Medical Admin: Fleet map, availability, active cases, facility/district filter, last GPS and trip status.

3. Core Control Rules

- Only registered GPS devices are accepted; unknown device IDs are rejected/flagged.
- GPS location proves vehicle movement; rescue decisions and case status remain with authorized officials/staff.
- GPS stale/offline status is automatically highlighted; a 180-second stale threshold is recommended.
- Historical GPS points are retained for route review, trip verification, kilometre calculation and MIS reporting.

CONTINUATION SHEET

GPS Animal Ambulance Tracking - Company Management Responsibilities

SUBJECT: HOW MAHAPRABHU TECH INNOVATION PRIVATE LIMITED WILL MANAGE THE SYSTEM

Dear Sir/Madam,

4. Mahaprabhu Tech - Management Responsibilities

GPS DEVICE CONTROL

Map each approved GPS IMEI/device ID to the correct ambulance, district and medical facility; coordinate activation/connectivity with the GPS provider.

API & DASHBOARD

Operate the secure GPS ingestion API, validate device/location data, maintain current and historical positions, and keep the Medical Admin dashboard available.

LIVE MONITORING

Track GPS freshness, offline/stale vehicles, invalid coordinates and system/API failures; maintain an incident log and escalation trail.

SECURITY & BACKUP

Apply role-based access, HTTPS/TLS, protected credentials and audit logs; maintain automated database/files backup, separate copy and restoration testing.

TECHNICAL SUPPORT

Receive dashboard/GPS integration issues, diagnose, coordinate with network/GPS vendors, escalate when required and close incidents after verification.

MIS & REPORTING

Provide authorized reports on active ambulances, trips, response time, GPS availability, kilometres travelled, offline duration and unresolved technical issues.

5. Daily Operating Cycle

Morning: verify server/API, GPS feed, backup success and offline vehicles. | During Operations: monitor live locations, case-linked trips and GPS exceptions. | Incident: log -> diagnose -> coordinate/escalate -> resolve -> verify closure. | End of Day: verify completed trips, GPS exceptions and backup status. | Periodic: submit MIS and test backup restoration.

6. Responsibility Boundary

Mahaprabhu Tech: Technology platform, GPS integration, security, backup, monitoring tools, MIS and technical support.

Department: Ambulance deployment, staff operations, rescue/medical decisions, approvals and authorized data use.

Outcome: A department-controlled, GPS-verified ambulance monitoring system with traceable trips, auditable case movement and accountable technical management by Mahaprabhu Tech Innovation Private Limited.

Yours faithfully,

For MAHAPRABHU TECH INNOVATION PRIVATE LIMITED
